

AI Copilot Usage Log (Curated)

Session Metadata

- Unit: NIT2112 Object Oriented Programming
- Project: OzZoo simulation (`ozzoo\_gui`)
- Session timeframe: 2026-04-06 to 2026-04-10
- Purpose: Use Copilot to interpret the design file, generate implementation-ready guidance, and export documentation

This log is curated for assessment evidence. It highlights high-value prompts, representative AI outputs, and why each prompt was used.

Key Prompt 1 - Design Ideas and Implementation Planning

Prompt

`Explain @ozzoo\_design.md to a student who will implement the program.`

AI Output Snippet (generated explanation text)

> "You're creating OzZoo, a text-based wildlife park simulation game where you manage an Australian zoo."
>
> "Start with the core hierarchy, build incrementally, and test as you go."

AI Output Snippet (generated structure)

```
```text
Animal (ABC)
├── Mammal
│ ├── Koala
│ └── Kangaroo
├── Bird
│ └── Emu
└── Reptile
 └── Saltwater Croc
```
```

Analysis

I used this prompt to convert a long technical design document into a student-friendly implementation guide. The AI response helped map requirements to practical coding order (what to implement first, what can be added later), reducing ambiguity before coding.

Key Prompt 2 - Code Generation Support (Starter Patterns)

Prompt

`Explain @ozzoo\_design.md to a student who will implement the program.`

AI Output Snippet (generated code-style scaffold)

```
```python
class Animal(ABC, IFeedable):
 @abstractmethod
 def make_sound(self) -> str:
 pass

 @abstractmethod
 def get_diet(self) -> str:
 pass
...

```

**\*\*Analysis\*\***

This prompt also produced useful code scaffolding and class design examples. I used those snippets as a reference for abstract methods, interface contracts, and inheritance structure when planning implementation.

---

**## Key Prompt 3 - Documentation and Submission Packaging**

**\*\*Prompt\*\***

`export to pdf`

**\*\*AI Output Snippet\*\***

```
```text
Created file ...\OzZoo_Implementation_Guide.md
✓ PDF created successfully!
Location: ...\OzZoo_Implementation_Guide.pdf
```

```

**\*\*Analysis\*\***

I used this prompt to transform the AI-generated explanation into a clean submission artefact. It shifted the workflow from drafting content to deliverable preparation.

---

**## Key Prompt 4 - Debugging and Optimisation During PDF Export**

**\*\*Prompt(s) used by Copilot during conversion workflow\*\***

- "Check for PDF tools and convert"
- "Convert markdown to PDF with Python"
- "Convert to PDF using Word or HTML"

**\*\*AI Output Snippet\*\***

```
```text
Available tools: python
Python was not found...
Attempting to use Microsoft Word for PDF conversion...
✓ PDF created successfully!

```

...

****Analysis****

This sequence shows practical debugging and optimisation. When the first conversion path was unavailable, Copilot switched methods and completed the export successfully using a reliable fallback, maintaining progress without rework.

Session Deliverables Produced

1. `OzZoo\_Implementation\_Guide.md`
2. `OzZoo\_Implementation\_Guide.pdf`
3. `AI\_Copilot\_Usage\_Log\_Session\_2026-04-10.pdf` (this log)
